## 1. Application Access

Access our Food Planner application using the below url. It directs you to the application with Login in the upper right corner and the Menu Navigation on the left side.

URL: <https://apps.hdap.gatech.edu/newfoodplanner2frontend/>

## 2. Account Management

**2.1. Log In** By clicking Login from the initial page, you can access the login page. Using the test credential below, we can sign into the application.

*Username: test, Password: test*

**My Food Planner**

Username

Password

**LOGIN**

Don't have an account [Sign up!](#)

**Login in with example creds:**  
**Username: test, Password: test**

**2.2. Sign Up** Clicking “Sing up” button takes you to the Sign Up page. Enter the required information as well as current allergies. It will create an account on FoodPlanner as well as create a patient on HAPI FHIR with the allergy conditions .

## Sign up

First Name  
Eliot

Last Name  
Ryan

Username  
starbaker

Creates an account on FoodPlanner.

Password  
....

Creates a Patient on HAPI FHIR with the allergy conditions.

Email  
test@test.edu

Seafood ✕ Gluten ✕

SIGN UP

**2.3. Log out** After signing into the application, you can see the user's name displayed on the left hand corner and the entered allergy conditions are saved on the bottom of the allergy search bar. Lastly, by clicking "LogOut" in the top right corner, it will sign you out.

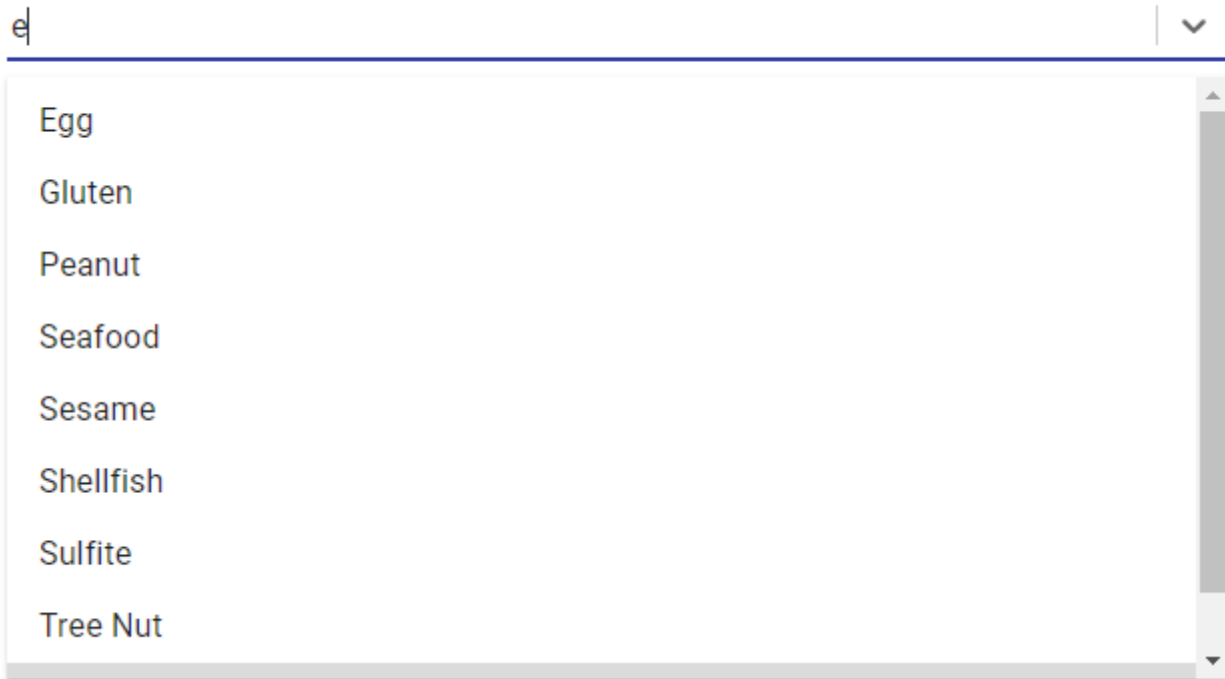

### 3. My Allergies

Through the left side bar, you will be able to find “My Allergies” page. This will show you the current allergies and allow you to edit them. The allergy information is also received via HAPI FHIR communication using FHIR patientID and maintained by user input. This allergy data will be preserved when you refresh the page.

\* Search allergies: Typing a few characters of the allergen on the search bar will populate a list of matching items.

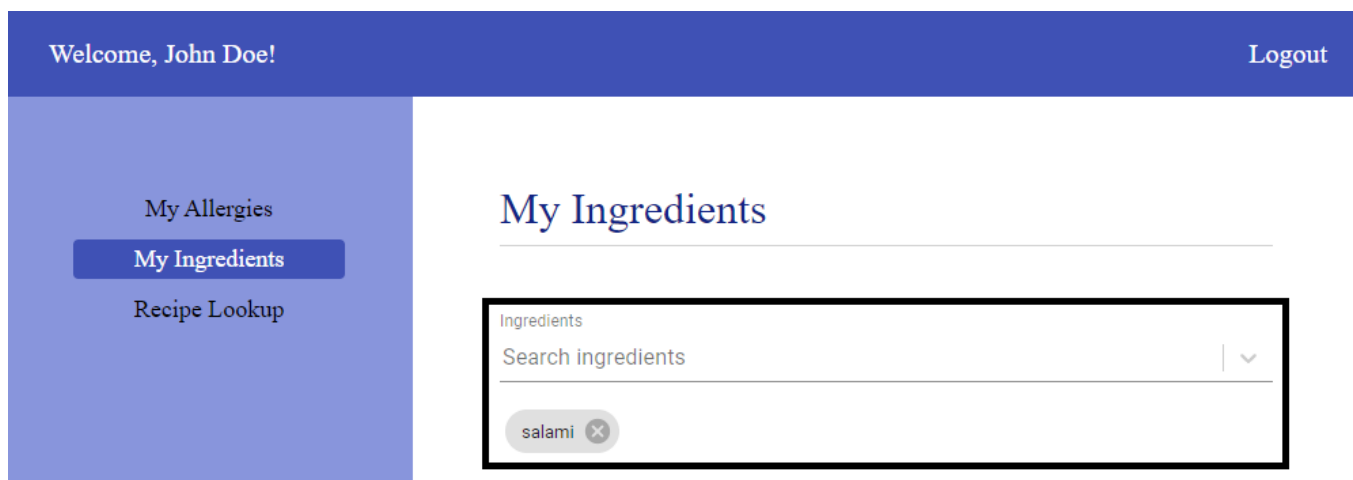

## Allergies

A screenshot of a web application's 'Allergies' dropdown menu. The search bar at the top contains the letter 'e' and a downward arrow. Below the search bar, a list of allergens is displayed: Egg, Gluten, Peanut, Seafood, Sesame, Shellfish, Sulfite, and Tree Nut. A vertical scrollbar is visible on the right side of the list.

Add allergies: By selecting the one from the list, the allergen will be registered on the bottom of the search bar. \*  
Delete allergies: Clicking X button next to the saved allergen will delete it from your allergies. \*

## 4. My Ingredients

Similarly, using the left side bar you will be able to find “My Ingredients” page. This will show you previously added ingredients and allow you to edit them. The ingredient search results are pulled from Spoonacular API and the saved list of ingredients are maintained by user. In the same way with allergies, the ingredient data will be preserved when you refresh the page.

A screenshot of the 'My Ingredients' page. The top navigation bar is dark blue with 'Welcome, John Doe!' on the left and 'Logout' on the right. The left sidebar is light blue and contains three menu items: 'My Allergies', 'My Ingredients' (which is highlighted with a dark blue background), and 'Recipe Lookup'. The main content area has a title 'My Ingredients' followed by a horizontal line. Below the title is a search bar labeled 'Ingredients' with the placeholder text 'Search ingredients' and a downward arrow. Below the search bar, there is a list of ingredients, with 'salami' currently selected and marked with an 'X' button for deletion.

- \* Search ingredients: Typing a few characters of the ingredient on the search bar will populate a list of matching items.
- \* Add ingredients: By selecting the one from the list, the ingredient will be registered on the bottom of the search bar.
- \* Delete ingredient: Clicking X button next to the saved ingredient will delete the item from the saved list.

## 5. Recipe Look up

Lastly, on the left side bar, you will find the “Recipe Look up” menu. This page will take your allergies and ingredients as input and recommend the meal planning options. The recipes are received from Spoonacular API.

\* Search recipes: You can search by type of “Cuisine” and “Recipe Keyword”. If you do not enter any information into these search fields, the query will return all categories. The user can also filter results by their “Allergies” and their “Ingredients”.

As shown in the example, a cuisine of American and keyword of pizza was used and resulted in three hits that matched those inputs without the “Allergy” or “Ingredient” filter set.

- View recipes: By clicking “View Recipe” button, it will direct you to a web page with the recipe detail.
- View Nutrition: By clicking “View Nutrition” button, the application populates a page with the total calories of the recipe and a pie chart of nutritional information.

## 6. Local Application Deployment

**6.1. How To Run Local Build** To deploy all three dockers (frontend, backend, database) download and install docker here. URL: <https://www.docker.com/> Next, open up terminal or PowerShell, and cd to FoodPlanner2 project folder and run

- build tagged services "docker-compose build"
- start all services "docker-compose up"
- stopping all services "docker-compose down"

All in one command: "docker-compose down; docker-compose build; docker-compose up;"

Frontend URL: <http://localhost:3000/> Backend URL: <http://localhost:8080/>

**6.2. How To Access Local Database** Database access, please download pgAdmin 4 and connect to localhost:5432 using username 'postgres' and no password.

## 7. Production Application Deployment

Please refer to section 2 of the Special Instructions document.

URL: <https://github.gatech.edu/gt-cs6440-hit-fall2019/FoodPlanner2/blob/master/Final%20Delivery/Special%20Instructions.pdf>

## 8. Checks To See If The Servers Are Alive

### 8.1. Production Servers Frontend Application URL:

`curl -I https://apps.hdap.gatech.edu/newfoodplanner2frontend/` Response:

```
HTTP/1.1 200 OK
Date: Sun, 24 Nov 2019 20:54:07 GMT
Server: envoy
content-type: text/html
content-length: 2611
last-modified: Wed, 20 Nov 2019 04:56:31 GMT
etag: "5dd4c77f-a33"
accept-ranges: bytes
x-envoy-upstream-service-time: 0
Access-Control-Allow-Origin: *
```

Backend Application URL:

`curl https://apps.hdap.gatech.edu/newfoodplanner2backend/` Response:

Hello Runtime Terror

Database URL:

`https://apps.hdap.gatech.edu/pgadmin/login?next=%2Fpgadmin%2Fbrowser%2F`

Database Name: foodplanner2database

Login: student@hdap.gatech.edu

Password: hdap2019!

Database Login: test

Password: test

### 8.2. Local Servers Frontend Application URL:

`curl -I http://localhost:3000/` Response:

```
HTTP/1.1 200 OK
Server: nginx/1.17.4
Date: Sun, 24 Nov 2019 21:14:06 GMT
Content-Type: text/html
Content-Length: 2611
Last-Modified: Fri, 22 Nov 2019 07:50:48 GMT
Connection: keep-alive
ETag: "5dd79358-a33"
Accept-Ranges: bytes
```

Backend Application URL: `curl http://localhost:8080/` Response:

Hello Runtime Terror

Database access, please download pgAdmin 4.

Database URL: localhost:5432

Database Login: postgres

No Password

### 8.3. Postman Script Please refer to section 1 of the Special Instructions document.

URL: `https://github.gatech.edu/gt-cs6440-hit-fall2019/FoodPlanner2/blob/master/Final%20Delivery/Special%20Instructions.pdf`

Script URL: `https://github.gatech.edu/gt-cs6440-hit-fall2019/FoodPlanner2/blob/master/FoodPlanner.postman_collection.json`

**8.4. API Document** For all API functionalities, expected results and possible errors are all located in the API.pdf document below. URL: `https://github.gatech.edu/gt-cs6440-hit-fall2019/FoodPlanner2/blob/master/Final%20Delivery/API.pdf`

## 9. Version

- Front End
  - Node.js v10.16.3
  - yarn v1.19.1
  - npm 6.12.0
- Docker 2.1.0.3
- Back End
  - Java 1.8
  - SpringBoot 2.1.6.RELEASE
  - Maven 3.6.2
  - HAPI FHIR 3.1.0
- Database
  - postgres 12.0
